## Maple Lake Airport FY16 Hangar Area Pavement Improvements CONSTRUCTION UPDATE

The project includes crack fill, patching, and a slurry seal of the hangar areas.

---

### **September 2, 2015 CONSTRUCTION UPDATE:**

The City of Maple Lake will be completing a pavement maintenance project at the municipal airport this fall and next spring. The project area includes the taxiways within the hangar areas.

Work will include a small amount of bituminous patching, crack filling, and a slurry seal of the entire area. The general contractor for the area is Mid-Minnesota Hot Mix from Annandale.

The current schedule is to complete the bituminous patching work in early September. Crack filling operations will follow the bituminous patching.

The slurry seal coating will not be completed until May or June of 2016.

Please be aware of the proposed work and make provisions as necessary. For the most part, the proposed 2015 activities should not create any major restrictions on use of the hangar area. There may be short periods of time during the patching and crack fill work where access will be restricted.

### **KEY PROJECT CONTACTS:**

Justin Engelman Project Manager for Mid-Minn. Hot Mix (Contractor)	(320) 274-3037	<a href="mailto:justin@midmnhotmix.com">justin@midmnhotmix.com</a>
